

Open for Business: An Industry View of Open Standards

NIST: Open ICT Ecosystems Conference
Marc Ehrlich – IP Counsel
March 13-14, 2006

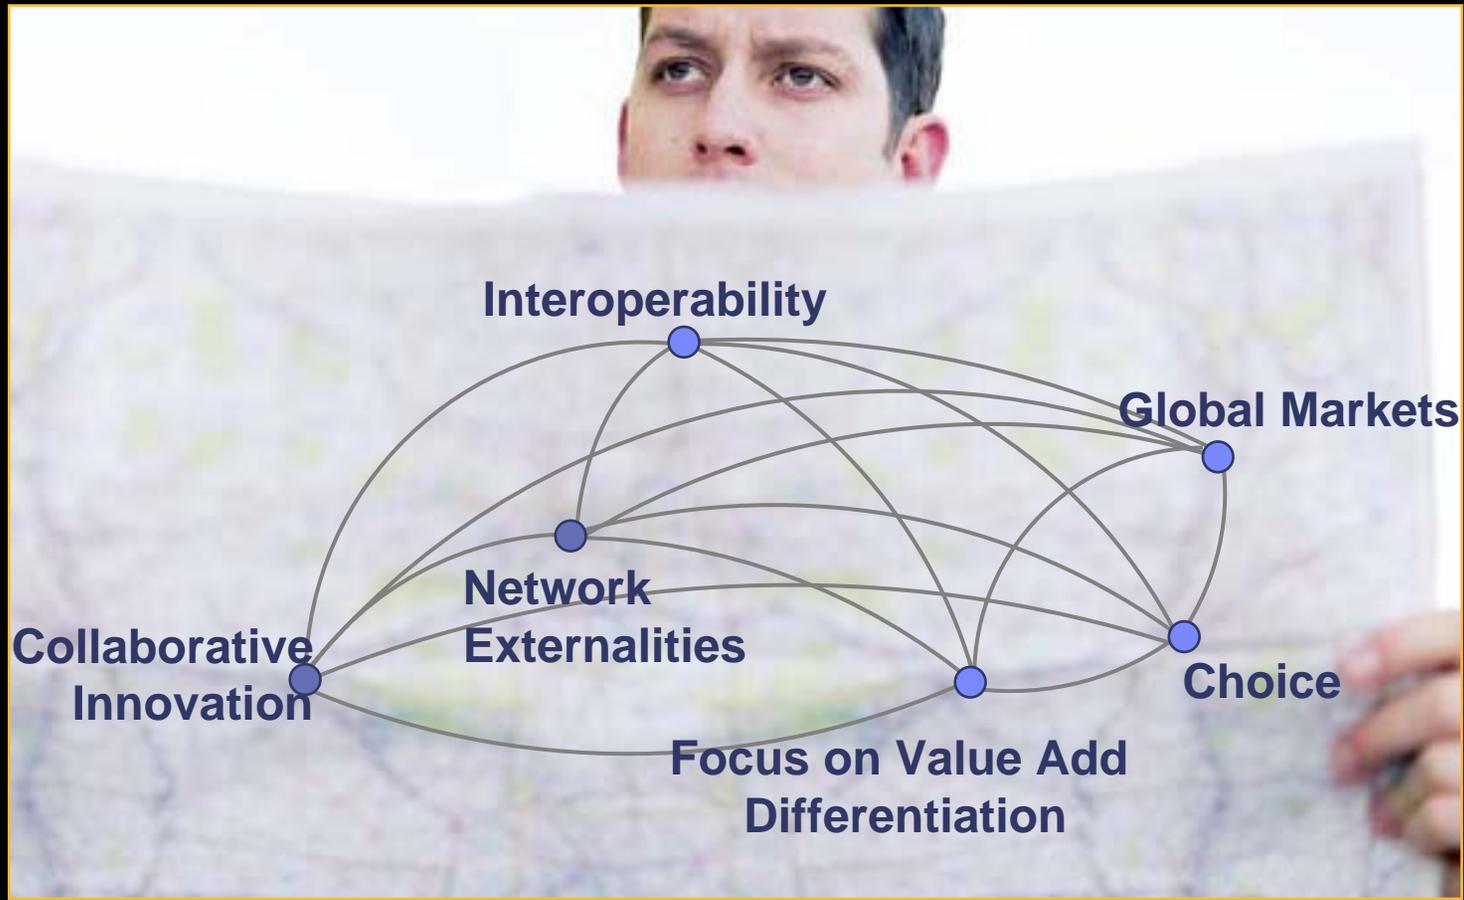

The Industry Paradox of Open Standards

- Friends or Foes?
 - Why would competing companies work together in open communities?
- What is Open?
 - What characteristics of an open standard achieve these business objectives?
- Open or Closed?
 - Why and when should a company choose to allow others to freely use proprietary IP?
- Quid Pro Quo?
 - What is the return on an open investment?

Open Standards translate to value for business

The Business of “Open”

- Leverage
 - Broadly Adopted Technological Platform
 - Access to Global Markets
 - Network Effects (Metcalfe’s law)
 - Ensures interoperability
 - *‘Industrial ‘free trade agreements’*

- Opportunity
 - Focus On Differentiation and Value Add
 - Technology/Service on open standards
 - Secure development roadmap
 - Avoid development to competing platforms
 - *‘Cooperate on the platform – compete on differentiation’*

- Customers
 - Increased choice & price options
 - Range of vendors which different:
 - Price points
 - Functionality options
 - Service support options
 - Product utility enhanced via interoperability

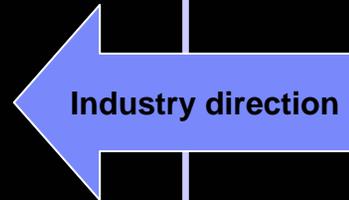

'Open' Means Business

- Business Objectives Dictate Characteristics of Open
 - Broadly adopted platform
 - Secure for future development & consumption
 - Ensures Interoperability
- 'Open' Should be Fashioned to
 - Attract the best thinking of the most developers
 - Provide a clear and stable picture of implementation details
- **Open = Transparency**
 - Open & accessible
 - Membership
 - Development process & records
 - Use terms
 - No side agreements
- **Open = Stability**
 - Consensus decision making; No single party veto
 - Simple and consistent terms of use
 - Backward compatible if applicable
- **Open = Balance**
 - Encourage maximum participation and adoption
 - Promote public benefit of std & private interests of firms

Open or Proprietary?

The IT industry is evolving a new equilibrium

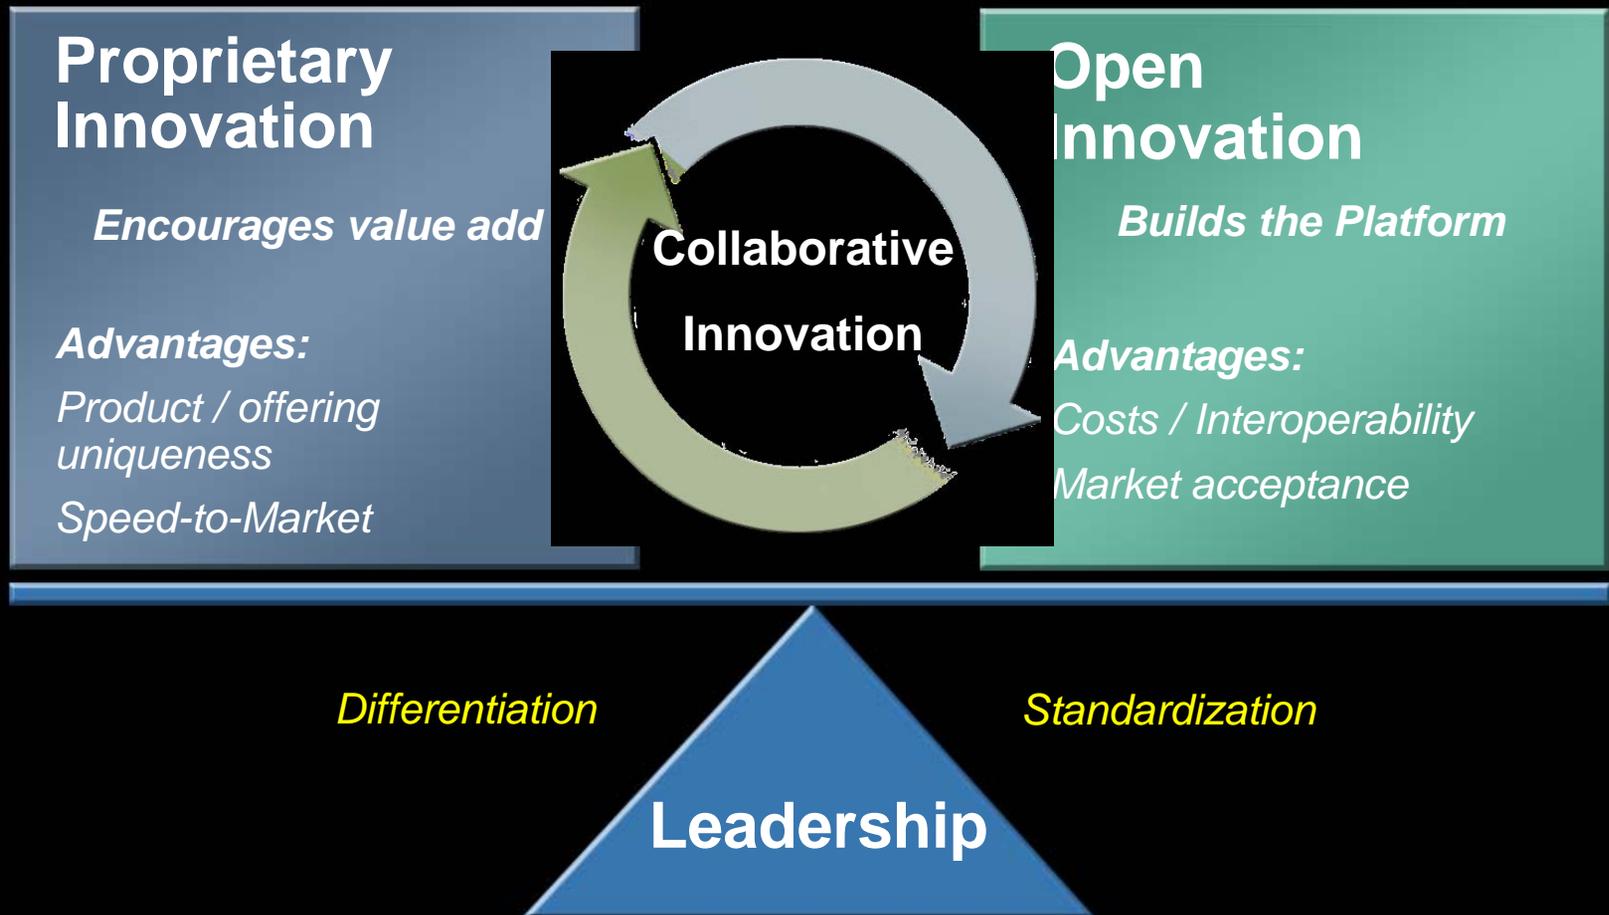

Totally
Open

Totally
Proprietary

More transparent,
More community
involvement

Where do we need to be today to drive innovation, solve customer problems, and accelerate growth?

Collaborative Innovation & The Innovation Cycle: It's not "proprietary or open," it's "and"

New IP Practices Accelerate Innovation *By Fostering Competition and Collaboration*

- Proprietary IP brings distinction to new ideas, differentiation to corporate identities and fosters healthy competition in the marketplace
- Open or shared IP fosters community problem solving and collaboration; can expedite innovation
 - Open standards as **new infrastructure** of industry
 - IP used to **influence not exclude**

Open Standards as the New Infrastructure

Paradigm Shift for IP Leverage In the Information Economy

- Industrial Economy - Vertically Integrated Firms
 - Ex. Ford Motor Co. Assembly Line Pioneer
 - Owned Rubber Tree Plantations
 - Standards emerge to address intra-firm interoperation. Nuts/bolts
 - IP used to *protect* internal infrastructure *by excluding* competitors
- Information Economy - Virtually Integrated Firms
 - Global Network enables outsourcing and specialization in the 'Flat World'
 - Standards enable business componentization and networked interoperation of the Virtual Firm
 - IP used to *shape* external infrastructure *by opening access to IP* thus influencing the development of standards

The IBM Open Participation Report Card

1998 / 1999

Java, XML

- Co-led XML4J, W3C DOM, XSL
- Led Apache XML projects Xalan Xerces, SOAP
- Founder XML.org
- Elected OASIS Board of Directors

2000

Web Services & UDDI

- Co-author WSDL, SOAP 1.1
- Cofounder UDDI.org
- Author UDDI specification

2001

Web Services and Tools

- Led submission of WSDL to W3C
- Founder Eclipse.org
- Co-author W3C XML Schema
- Chair OASIS WS-Remote Portlets TCs
- IBM Web Services Toolkit released on alphaWorks
- Participation in Mozilla

2002

WS-I, OMA and WS-Security

- Founder WS-I.org
- Founder OMA
- Co-author BPEL, WS-TX, WS-TC
- Co-author WS-Security
- Co-chair UDDI TC
- Linux contributions to scalability

2003

Web Services Interoperability

- Co-chair OASIS WS-Security 1.0
- Submitted BPEL to OASIS
- Co-chair OASIS WS-DM TC
- Submitted CBE to OASIS
- Submitted WS-Manageability to OASIS

2004

Web Services Management

- Chair WS-I Basic Profile 1.1
- Co-chair OASIS WS-Notification TC
- Co-chair WS-Resource Framework TC
- Chair OASIS DITA
- Submitted WS-Addressing to W3C
- Contributed UML2 to Eclipse

2005

Web Services Reliability

- IBM named chair IETF
- IBM commitment to RF in OASIS
- Co-author & submitted WS-RM to OASIS
- Led OASIS WS-DM and DITA to Standards status
- Database extensions to PHP
- Pledged 500 US patents to OSS
- Purchase of Gluecode

Specific industries create standards to meet their unique needs

Automotive

- Quality issues—warranty costs average \$700 per vehicle in US
- Growing need for multi-vendor in-vehicle systems/software integration

Healthcare

- Accelerating costs, slow response times, quality of patient records
- Increasing pressure to integrate payers, providers, hospitals

Electronics

- Moving from traditional manufacturing to configure-to-order
- Lack ability to mass produce with last-minute customization

Banking

- Information silos, redundancy and underutilization of data
- Pressure to speed development and delivery of new products & services

Retail

- Available data increasing exponentially (e.g., RFID), but not leveraged effectively
- Access to real-time information required to optimize supply chain

Telecom

- “Island” infrastructures—multiple legacy systems and heterogeneous environments
- No single view of the customer (activation, self-service, billing, customer care)

Example IBM Support for Industry Standards

- **Websphere Business Integration (WBI) for Financial Networks (WBIFN)**
 - Gives banks and financial institutions a single platform for all of their communication channels. Supports SWIFT and SWIFTNet and offers migration tools for IBM MERVA
- **Websphere Application Server (WAS) for Telecom**
 - Provides a set of Parlay API extensions to WAS for the rapid creation and delivery of new revenue producing telecommunications services which integrate e-business applications with diverse telecommunications networks (wireline, wireless and Internet)
 - Supports many 3rd party Parlay Gateways
- **WBI for Retail Distribution**
 - Integrates with the item management and synchronization functions offered by UCCnet
- **IBM Architecture & Planning Services for Web Services**
 - Assists customers with web services architectural guidance, web services implementation guidelines and web services best practices.
- **WBI Insurance Adapter for ACORD XML V1.0**
 - Enables business applications to send and receive business data and events asynchronously. A broker or server can exchange business objects with applications that send or receive data in the form of ACORD XML messages.
- **HIPAA SupportPac for WDI (Healthcare)**
 - Uniquely provides support for translation of the complex dynamic hierarchical ANSI X12 formats used to support the exchange of HL7 documents in ANSI X12 transactions such as Advance Ship Notice and Medical Claims

Open Innovation Starts By Connecting Industries

Interoperability via standards is the vital link

Web Services

- Standardized, secure, reliable information exchange infrastructure

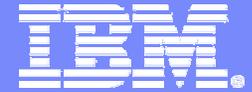

Open Document Formats

- Common open formats for documents and unstructured information, free from vendor lock-in

Electronic Forms

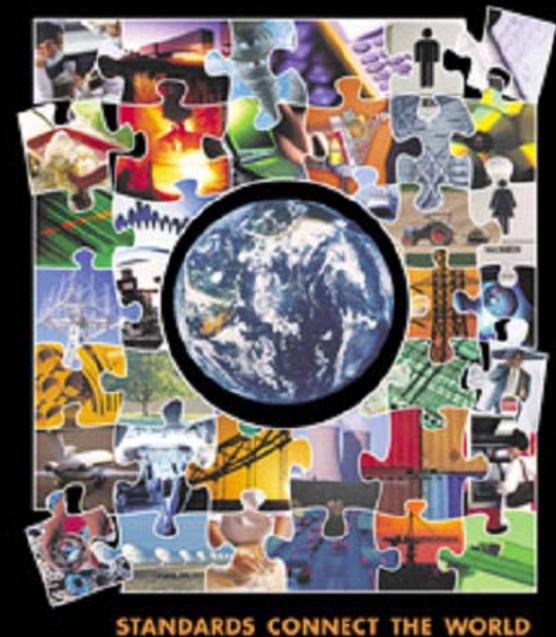

- Unified, consistent, more error-free and structured way of getting information

Press release

EMBARGOED: Not for publication until 0001hrs 20 June, 2005

Standards worth £2.5bn to UK business

Standards contribute £2.5bn per annum to the UK economy according to a new study published by the Department of Trade and Industry (DTI) and the British Standards Institution (BSI). The value of standards to the economy has been quantified for the first time ever and the research highlights their contribution to productivity, growth, innovation and international trade.

Standards, which can be for anything from household goods, to bridges, to sophisticated services, represent an indispensable level of know-how about a given area. They set rules, guidelines or definitions to help make business simpler by increasing the reliability of many goods and services and providing a common language for all businesses.

The DTI commissioned research reveals:

- Standards make an annual contribution of £2.5 billion to the UK economy;
- 13% of the growth in labour productivity is attributed to the role of standards;
- Standards are an enabler of innovation and facilitator of technological change; and
- The economic return from investment in standards makes sound business sense at both a macro and micro-economic level.

appendix

Example: OpenDocument Format

- An XML based specification describing the content and formatting of a document.
- Developed by a multi-vendor committee at OASIS (Organization for the Advancement of Structured Information Standards).
- Meets the common test for openness.
- Has been submitted to ISO for certification.
- Is being adopted by many vendors.

W3C Advisory Board

The TAG is chartered for an indefinite duration. Work items include:

- [issues list](#) documents issues that the TAG has agreed to address
- [TAG Findings](#)

"Created in March 1998, the Advisory Board process, and conflict resolution. The Board meets regularly, soliciting Member comments and suggestions for the evolution of the Process Document, which is unrelated to Web architecture; see the W3C Process Document for more details."

Participation and Policies

Tim Berners-Lee (W3C) is the Chair of the TAG. The following people were elected (5 individuals) by the W3C Membership or appointed Director to the TAG:

The following people currently sit on the Advisory Board:

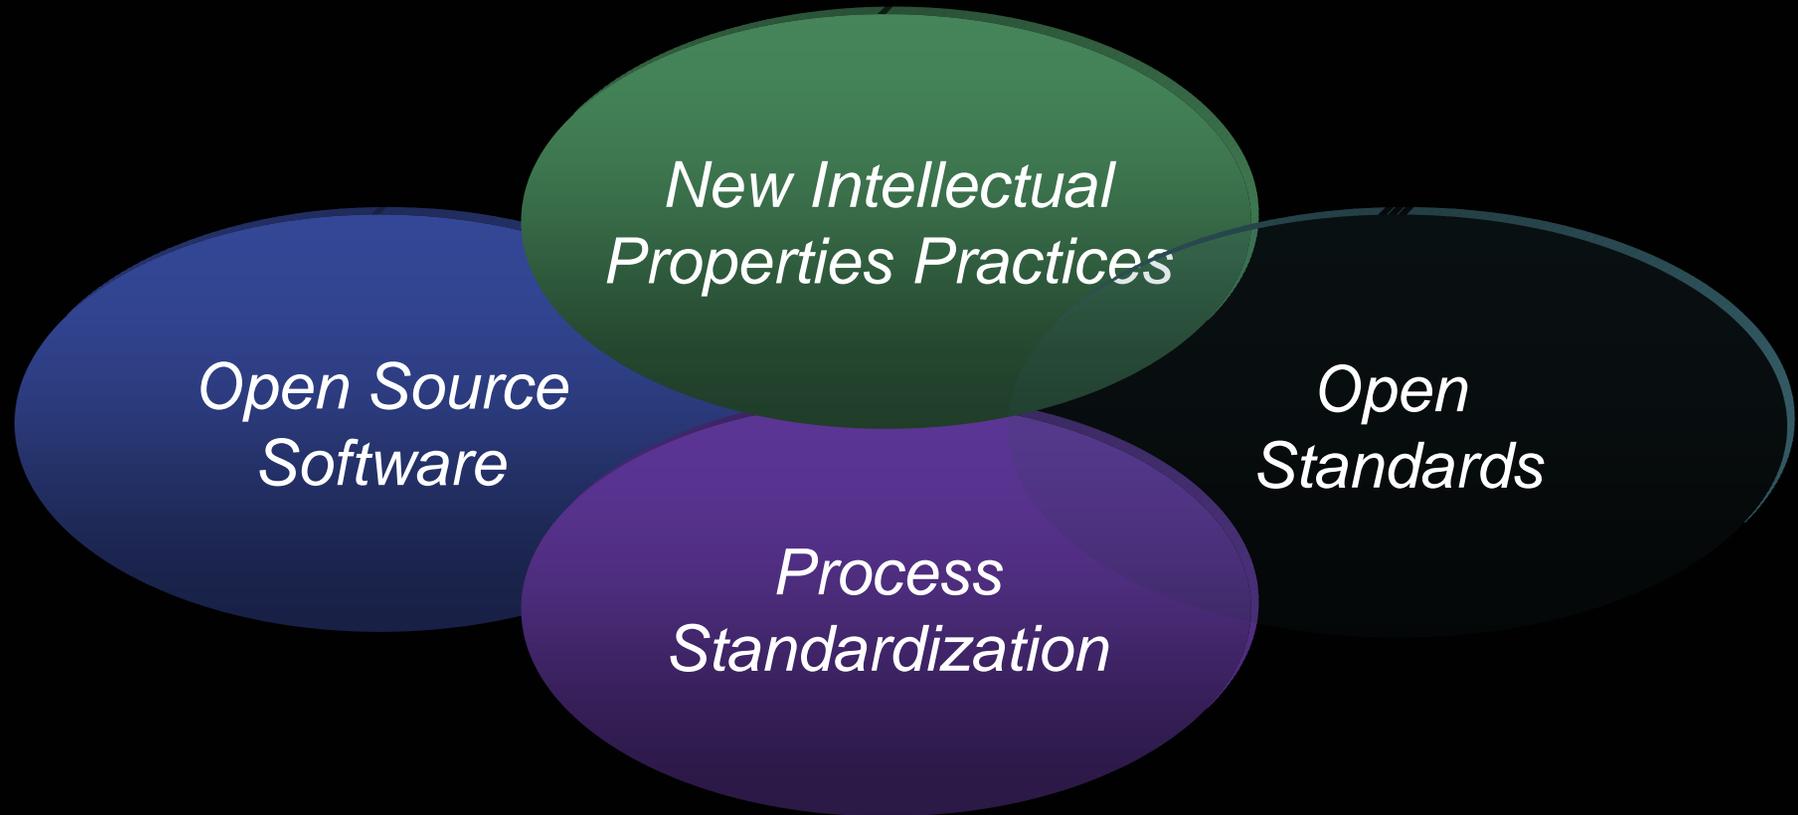

- Jean-François Abramatic (ILOG)¹
- Ann Bassetti (Boeing)¹
- Jim Bell (Hewlett-Packard)¹
- Don Deutsch (Oracle)²
- Eduardo Gutentag (Sun Microsystems)¹
- Steve Holbrook (IBM)¹
- Ken Laskey (MITRE)²
- Ora Lassila (Nokia)²
- Claus von Riegen (SAP AG)²
- Dan Connolly (W3C)²
- Roy Fielding (Day Software)²
- Noah Mendelsohn (IBM)³
- David Orchard (BEA)¹
- Vincent Quint (INRIA)¹
- Ed Rice (HP)¹
- Henry Thompson (U. of Edinburgh)⁴
- Norm Walsh (Sun)¹

Notes:

- ¹ Two-year term began 1 Feb 2005 (see [election announcement](#)).
- ² Two-year term began 1 Feb 2004 (see [election announcement](#)).
- ³ Term began by Director appointment 27 Sep 2004, until 31 Jan 2006.
- ⁴ One-year term began 1 Feb 2005, until 31 Jan 2006.

Steve Zilles is currently acting Chair of the TAG. As stated in the [W3C Process Document](#), Advisory Board participants use their best efforts to ensure that the TAG's work is open and transparent.

Openness Accelerates Innovation

Open Standards Accelerate Innovation

By Defining Industry-wide Best Practices

Open Industry Standards are:

- 1) openly documented
- 2) published without restriction
- 3) freely available for adoption and evolve collaboratively through standards organizations

*Open
Standards*

New Intellectual Property Practices

Accelerate Innovation by removing barriers to adoption and use

The move to openness is accelerated when the rules surrounding the use of intellectual property are clear, simple, and remove open source and open standards encumbrance.

New Intellectual Property Practices

Open Standards

Process Standardization

What is Collaborative Innovation?

- **Community-driven** approach to problem solving
- People working **across geographical and organizational boundaries** to confront today's most pressing challenges
- **Enabled by open standards and new intellectual property practices**, it unites perspectives from a host of disciplines to:
 - Rapidly solve business issues
 - Accelerate technological **advancements**

New IP Practices Accelerate Innovation *By Fostering Competition and Collaboration*

- Proprietary IP brings distinction to new ideas, differentiation to corporate identities and fosters healthy competition in the marketplace
- Open or shared IP fosters community problem solving and collaboration; can expedite innovation

THE NEW YORK TIMES, MONDAY, APRIL 11, 2005 C1

Sharing the Wealth at I.B.M.

By STEVE LOHR

I.B.M. is renowned for its rich storehouse of patented inventions. It once again led the research sweepstakes in America last year, collecting 3,248 patents, more than any other company. And it earned more than \$1 billion last year from licensing and selling its ideas.

So why has I.B.M. shifted course recently, giving away some of the fruits of its research instead of charging others to use it? The answer is self-interest.

Diverging from conventional wisdom, the company has calculated that sharing technology can sometimes be more profitable than jealously guarding its property rights on patents, copyrights and trade secrets. The moves by I.B.M., the world's largest supplier of information technology services and hardware, are

Hoping to Profit By Making Patents Available Free

being closely watched throughout the business world.

Earlier this year, I.B.M. made a broad gesture toward what it called a new era in how it controls intellectual property. It announced in January that it would make 500 patents — mainly for software code that manages electronic commerce, storage, image processing, data handling and Internet communications — freely available to others.

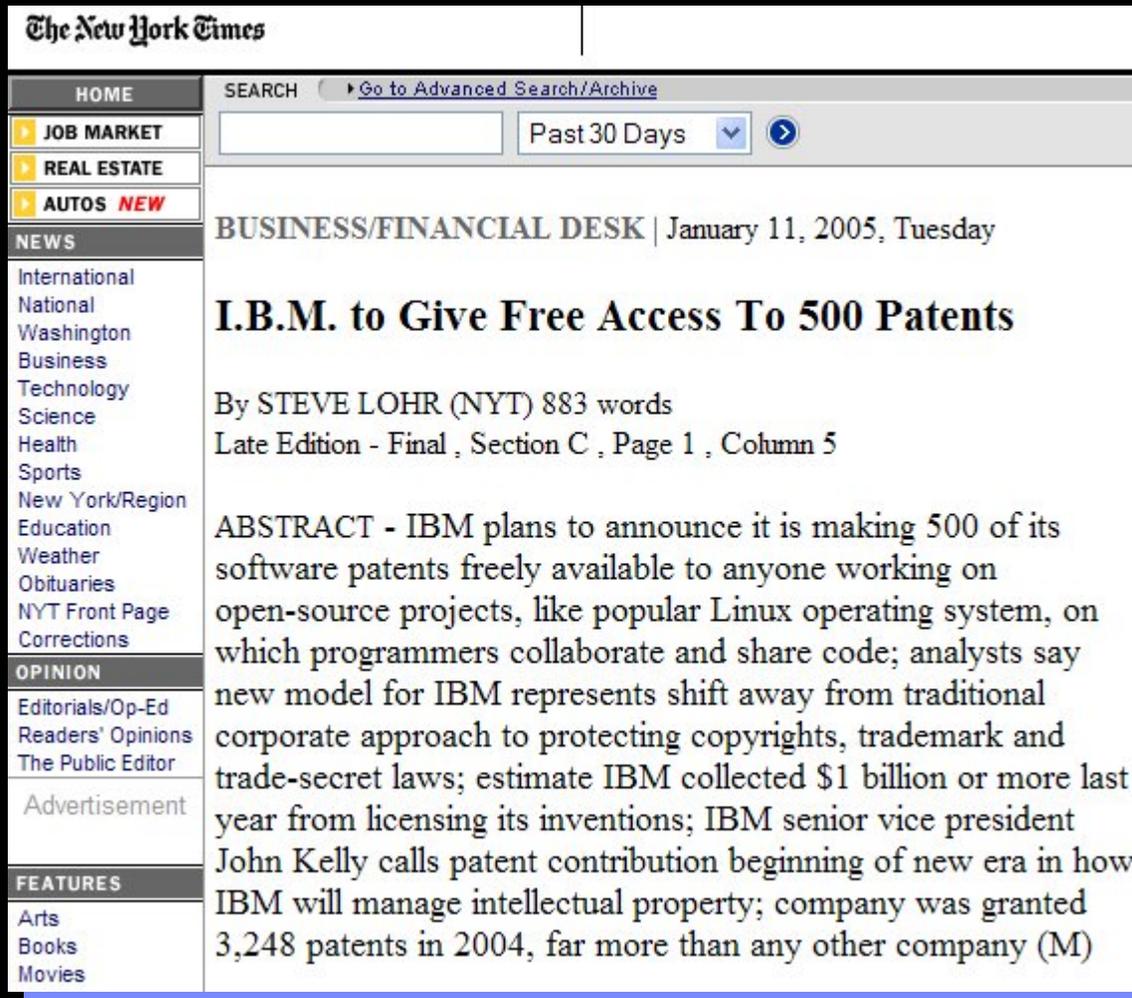

would follow.

This month, the company said that its future patent contributions to the largest standards group for electronic commerce on the Web, the Organization for the Advancement of Structured Information Standards, would be free.

I.B.M. is at the forefront, but companies in industry after industry are also considering their strategies on intellectual property: What do you share? What do you keep proprietary?

The Internet, globalization and pressures are driving businesses to collaborate in the pursuit of higher productivity and profits, and to accelerate the pace of product development. That collaboration requires companies to share more technical information with corporate customers, suppliers and ind-

IBM's pledge to innovate

The screenshot shows the front page of The New York Times website. The main headline is "I.B.M. to Give Free Access To 500 Patents" by Steve Lohr. The article is dated January 11, 2005, and is part of the Business/Financial Desk. The abstract of the article is visible, stating that IBM plans to announce it is making 500 of its software patents freely available to anyone working on open-source projects, like Linux. The article is 883 words long and is from the Late Edition - Final, Section C, Page 1, Column 5.

I.B.M. to Give Free Access To 500 Patents

By STEVE LOHR (NYT) 883 words
Late Edition - Final , Section C , Page 1 , Column 5

ABSTRACT - IBM plans to announce it is making 500 of its software patents freely available to anyone working on open-source projects, like popular Linux operating system, on which programmers collaborate and share code; analysts say new model for IBM represents shift away from traditional corporate approach to protecting copyrights, trademark and trade-secret laws; estimate IBM collected \$1 billion or more last year from licensing its inventions; IBM senior vice president John Kelly calls patent contribution beginning of new era in how IBM will manage intellectual property; company was granted 3,248 patents in 2004, far more than any other company (M)

IBM is not alone in thinking that this is a good idea

CA gives patents to open source

Martin LaMonica, CNET News.com | 08 September 2005

[E-mail](#) [Printer Friendly](#) [Talkback](#)

Computer Associates will give open-source projects access to 14 of its patents, the company said on Wednesday as it also announced a technology cross-licensing deal with IBM.

The US patents, which include their equivalents in other countries, address a range of technologies, covering application development, data analytics and systems management. CA said it will provide royalty-free access to the patents and not assert claims against people who make use of them.

CA said it is following IBM's lead, which earlier this year pledged 500 patents to open-source communities. CA also urged other technology companies to help create a "patent commons."

IBM's Just Getting Started!

The screenshot shows a web browser displaying the IBM website. The main article is titled "Unlocking IBM's Intellectual Capital" with the subtitle "Healthcare and Education to benefit from IBM's innovation". The article features a large image of an open padlock and text explaining IBM's commitment to open standards in healthcare and education. The page includes a navigation menu on the left, a search bar at the top, and various links and buttons throughout the layout.

Unlocking IBM's Intellectual Capital

Healthcare and Education to benefit from IBM's innovation

Open software standards lead to greater efficiency and innovation, transforming both health care and education.

Your health care provider can access your entire medical history, so you never have to fill out another medical information sheet for your physician.

A college student can attend her school of choice from anywhere in the world and not worry about being too remote to learn and interact.

IBM is working to make these goals a reality. The company [announced today](#) it is pledging royalty-free access to our patent portfolio for the development and implementation of selected open healthcare and education software standards built around web services, electronic forms and open document formats.

IBM believes open software standards lead to greater efficiency and innovation, transforming both health care and education.

For example, we all understand emergency room requests have a higher priority than routine office inquiries. IBM's patents differentiating levels of service could speed that capability in web services to market.

In the education industry, IBM has patents that use web services to link students and teachers anywhere in the world based on the compatibility of their teaching and learning styles.

Balanced approach

While intellectual property (IP) ownership is an essential driver of innovation, technological advances are often dependent on shared knowledge, standards and collaboration. IBM's balanced IP management enables both proprietary and open models while protecting truly new and useful inventions.

Each year, IBM generates more than a \$1 billion of intellectual property income, and leads the world in U.S. patents issued. This income and pipeline are vitally important to our ability to continue to innovate. At the same time, opening access to our patents allows us to treat IP as intellectual capital that IBM invests in specific industries for them to improve services and reduce costs while helping them innovate and grow.

Previously IBM pledged 500 patents to the open source community, and has made other, more targeted donations of IP to industry groups in retail, insurance and automotive.
